AIDS /HIV

Aids is a killer disease which has no cure up to now. The only way of avoiding it is by prevention. Remember that prevention is the only sure way of living H.I.V free lives since there's no known vaccine and cure for HIV/Aids. So any person, man or woman must abstain from having random sex and be faithful to your partner. For young people, boys and girls should abstain from sex until they are of age in order to make good decision about their future.

One should also avoid bad company of people who are careless with their lives like drunkards and sex workers. Teach your children and even neighbors about this deadly disease.

Lastly go for H.I.V tests periodically in order to establish your status. In case your H.I.V tests are positive seek immediate advice and assistance from health workers to continue living a positive life.
