545/2 CHEMISTRY Paper 2 July/August 2023 2 hours

WAKISSHA JOINT MOCK EXAMINATIONS

Uganda Certificate of Education

CHEMISTRY

Paper 2

2 hours

INSTRUCTIONS TO CANDIDATES;

- Section A consists of 10 structured questions. Answer all questions in this section.

Answers to these questions must be written in the spaces provided.

- Section B consists of 4 semi structured questions. Answer any two questions from this section.
- Answers to section **B** must be written in the answer booklet/sheets provided and stapled at the back of the question paper.
- Show all your working clearly in both sections. Where necessary use;

 $[Ca = 40, Na = 23, C = 12, O = 16, H = 1, Molar gas volume at s.t.p = 22.4dm^3]$

For examiner's use only

SECTION A

Answer all questions in this section.

1.	(a)	Steel and Magnesium oxide are both important chemical substances. (i) State two properties that make steel different from magnesium oxide.					
		(ii)	State the method by which the components in steel can be separated.				
	(b)	A					
	(0)	(i)	nonium chloride was dissolved in water to form a uniform solution. State what was observed when, the solution is tested with methyl orang	e indicator.			
		(ii)	Give a reason for your answer.	(2 marks)			
			······································				
2.	The	atom o	f element Z of mass number 31 has 15 protons.				
	(a)	(i)	State the number of neutrons in Z.	(1 mark)			
		(ii)	Write the electronic configuration of the ion of Z.	(1 mark)			
	(b)	Tov	which group of the periodic table does Z belong?	(½mark)			
	(c)	Wri	te the formula of the oxide of Z and state the type of bond in the oxide.				
			nular;	(1			
		Тур	e of bond;	(1 mark)			
	(d)	An	atom Q consists of 17 neutrons and 15 protons. Which term is used to descritionship between Q and Z.?				
				(1 mark)			
		,					
3.	(a)	Gas Co _l	s W can be prepared using a mixture of Zinc granules, dilute hydrochloric acpper (II) sulphate.	eid and			
		(i)	Identify gas W	(½ marks)			
	1	VIII.	V. WAKISSHA Joint Mock Examinations 2023	_			

		(ii)	Write equation for the reaction leading to the formation of gas W.	(1½ marks)
		(iii)	State the role of copper (II) sulphate in the mixture.	(½ marks)
	(b)	Give produ	a reason why nitric acid cannot be used instead of hydrochloric acid in action of gas W.	the (1 mark)
	(c)	Gas V	W was burnt in excess air. State how the product formed can be identificatory.	
		• • • • • • • • • • • • • • • • • • • •		
			······································	
	(a)	Defin	ne the term rate of reaction.	(1 mark)
		• • • • • • • • • • • • • • • • • • • •		
		·····	···········	
	(b)	Oxyg	gen can be prepared in the laboratory by decomposition of hydrogen per	oxide.
		(i)	Write equation for decomposition of hydrogen peroxide.	(1½marks)
		(ii)	State two factors that can affect the rate of production of oxygen gas.	(2 marks)
	(c)		e one other substance other than hydrogen peroxide that can be used to per in the Laboratory.	
5.		_	d R of formula mass 106 consists of 43.40% Sodium, 11.32% Carbon b	y mass and
	(a)		rmine the molecular formula of R (Na = 23, C = 12, O = 16)	(2 marks)
				- 1
				Turn Over

	(b)	To ar	aqueous solution of R was added a solution containing copper (II) is State what was observed.	ons. (½ marks)
		(ii)	Write ionic equation for the reaction that took place.	(1½marks)
	(c)	Zinc d Write	ust was added to the product in (b) and the mixture warmed. down equation for the reaction that took place.	(1½marks)
		•••••		
		•••••		
6.	Sodi gase (a)	ous pro	phite and Calcium Carbonate when separately treated with dilute hydrocts were formed. tify the gaseous products formed when dilute hydrochloric acid reacts	
		(1)	Sodium sulphite	(1 mark)
			······	
		(ii)	Calcium carbonate	(1 mark)
				37,000
	(b)	Writ iden	e ionic equation for the reaction leading to the formation of the gaseo tified in (a) (ii).	us prod <mark>ucts</mark> (1½marks)
		•••••		
	(c)	Who	m 1.55 m = 5 m - 1 m - 0 m - 1 m	
	(0)	dilut Find	on 1.55 g of a mixture of calcium sulphate and calcium carbonate was be hydrochloric acid, 22.4 cm ³ of carbon dioxide gas was evolved at s. the mass of calcium carbonate in the mixture.	t.p.
				(2½marks)

	(ii)	Which of the two substances, methane and ethane, would produce mo Briefly explain your answer.	re heat? (1½marks)

(a)	Com	plete each of the following organic reactions and in each case name the r	najor product.
	(i)		
		Name of major product	. (½marks)
	(ii)	$C_6H_{12}O_{6(I)} \xrightarrow{\text{yeast}} \cdots$	(1 mark)
		Name of major product	(½marks)
(b)	Name		(1 mark)
	•••••		
(c)	Write	the equation for combustion of the major product in (a) (ii) above.	(1½marks)
	•••••		······
	•••••		
(a)	Comn	non salt is prepared in the laboratory by reacting Sodium hydroxide and chloric acid.	
	Name	the process of salt formation used.	(1 mark)
(b)	To an	aqueous solution of common salt was added silver nitrate solution follow	ved by
	(i)	State what was observed.	(1 mark)
	(ii)	Walter the second of Co. Al.	(1½marks)
(c)	Name		
(~)	Sodium	a Carbonate.	(½marks)
			• • • • • • • • • • • • • • • • • • • •
	(b) (c)	(a) Com (i) (b) Name (c) Write (a) Comm hydro Name (b) To an dilute (i) (ii)	(a) Complete each of the following organic reactions and in each case name the r (i) $C_2H_5OH_{(I)}$ Conc H_2SO_4 180^0C Name of major product (ii) $C_6H_{12}O_{6(I)}$ yeast 35^0C Name of major product (b) Name a reagent that can be used to identify the major product in (a) (i) above. (c) Write the equation for combustion of the major product in (a) (ii) above. (a) Common salt is prepared in the laboratory by reacting Sodium hydroxide and hydrochloric acid. Name the process of salt formation used. (b) To an aqueous solution of common salt was added silver nitrate solution follow dilute nitric acid. (i) State what was observed.

SECTION B

Answer any two questions from this section.

(a)	(i)	Draw a labelled diagram of the setup of apparatus that can be usulphur dioxide in the laboratory.	sed to prepare (3½ marks				
	(ii)	Write the equation for the reaction that takes place.	(1½marks				
(b)	State dioxi	what is observed and write equation for the reaction in each case de is;	served and write equation for the reaction in each case when sulphur				
	(i)	passed through a jar containing red flowers.	(2 marks				
	(ii)	treated with hydrogen sulphide.	(2 marks				
(c)			f sulphuric (6 marks				
Durir then t	ng the e	extraction of nitrogen from air the mixture is first passed through la sodium hydroxide solution.	neated copper,				
(a)	State	the reason for passing the air;					
	(i)	Over heated copper.	(1 mark)				
	(ii)	Through sodium hydroxide solution.	(1 mark)				
	(iii)	Write equations for the reactions that take place in a(i) and a(ii)	above.				
(b)	Desc	(3 marks) materials. (4½ marks)					
(c)		e					
	(i)	State what was observed.	(1½marks)				
	(ii)	Explain your observation.	(4 marks)				
(a)			(3 marks)				
(b)	into 1	two parts.	led				
	(i)						
	(ii)	Lead (II) nitrate solution was added to the second portion and was	(1 mark) rmed. (1½ mark)				
	(b) (c) During then to (a) (b) (c)	(ii) (b) State dioxi (i) (iii) (c) Using acid of then through (a) State (i) (iii) (b) Descential (iii) (c) Amragine (iii) (d) Containe (iii) (iii) (a) Descential (iii) (b) Iron into state (iii)	sulphur dioxide in the laboratory. (ii) Write the equation for the reaction that takes place. (b) State what is observed and write equation for the reaction in each case dioxide is: (i) passed through a jar containing red flowers. (ii) treated with hydrogen sulphide. (c) Using sulphur dioxide as a starting material describe the preparation of acid on industrial scale (include equations in your answer). During the extraction of nitrogen from air the mixture is first passed through I then through sodium hydroxide solution. (a) State the reason for passing the air: (i) Over heated copper. (ii) Through sodium hydroxide solution. (iii) Write equations for the reactions that take place in a(i) and a(ii) (b) Describe the manufacture of ammonia using nitrogen as one of the raw (c) Ammonia gas was dissolved in water and the resultant solution added to zinc sulphate drop wise until in excess. (i) State what was observed. (ii) Explain your observation. (a) Describe how iron (III) chloride can be prepared in the laboratory. (diagram not required) (b) Iron (III) chloride was dissolved in water and the resultant solution dividinto two parts. State what was observed when: (i) Sodium hydroxide was added to the first portion drop wise until in the control of the part of the part of the prepared in the laboratory.

7

- (c) Extraction of iron is a reduction process that goes on in three stages.

 Write equations to illustrate the chemical reaction that accompany the following processes in iron extraction.
 - (i) Formation of carbon monoxide from coke. (2½marks)
 - (ii) Reduction of the ore. (1½marks)
 - (iii) Removal of silicon dioxide by quick lime. (2½marks)
- (d) Describe the reactions between iron and each one of the following;
 - (i) Hydrochloric acid. (1½marks)
 - (ii) Steam. (1½marks)
- 14. (a) Graphite is one of the crystalline allotropes of carbon.
 - (i) Define the term allotropes.
 - (ii) Draw the structure of graphite. (2 marks)
 - (iii) State why graphite conducts electricity while other allotropes do not. (1 mark)
 - (b) Explain each of the following observations.
 - (i) When a carbon dioxide is bubbled through calcium hydroxide for a long time, a white precipitate is formed which dissolves to form a colorless solution.
 - (ii) When a charcoal stove is used in a poorly ventilated room suffocation occurs;
 - (iii) Carbon dioxide is not satisfactorily prepared from calcium carbonate and dilute sulphuric acid. (2 marks)
 - (iv) Ammonia gas in the laboratory cannot be dried using sulphuric acid. (2 marks)
