HOIMA DIOCESE EXAMINATIONS BOARD

UCE Mock Examination, 2023

CHEMISTRY Paper 2

2 hours

INSTRUCTIONS TO CANDIDATES

Section A consists of 10 structured questions. Answer all questions in this section. Answers to these questions must be written in the spaces provided.

Section B consists of 4 semi – structured questions. Attempt any two questions from this section.

Any additional question(s) answered will not be marked.

Answers to the questions must be written on the answer sheets provided.

In both sections all working must be clearly shown and must be in blue or black ink.

Any work done in pencil will not be marked except drawings.

Mathematical tables and silent non-programmable calculators may be used and where necessary use;

H = 1, C = 12, O = 16, N = 14, S = 32, Cl = 35.5, Na = 23, Fe = 56, Mg = 24, Zn = 65, K = 39

Density of water = $1 g cm^{-3}$.

Specific heat capacity of water = 4.2 J g⁻¹ K⁻¹.

1 mole of gas occupies 24 dm³ at room temperature.

1 mole of gas occupies 22.4 dm³ at s.t.p

SECTION A (50 MARKS)

Attempt all questions in this section in the spaces provided only.

1. When copper (II) oxide powder and ammonium chloride crystals were separately and concurrently heated strongly in a dry boiling tube shown in the diagram below, a gas reacted with copper (II) oxide.

(a)

Name

(4)	(i)	the process that took place as ammonium chloride was being h	neated.
	•••••	•••••	$(0\frac{1}{2} mark)$
	(ii)	the gas that reacted with copper (II) oxide.	(0½ mark)
	(iii)	substance, P.	(0½ mark)
	(iv)	the major gas, Q .	(0½ mark)
(b)	(i)	State what was observed as copper (II) oxide was being heated.	(01 mark)
•••••	(ii)	Write equation of the reaction between copper (II) oxide and the	

	2 octong whereby A	\boldsymbol{Z} and \boldsymbol{Z} are	non-me	etals.		atoms of elements W ,
	Atoms of elements Period	W 3	<i>X</i> 3	<i>Y</i> 4	Z 3	
When	he atoms combined, t	hey formed	d compo	ounds:	W_2X_3 and Y_2	YZ_2 .
	Write the electronic constant (i) W.					(0½ mark)
	(ii) Z .					(0½ mark)
(b)	State the type of bon	d that exist	in com	pound,	YZ_{2} .	(0½ mark
(c)	Using outermost she atoms, W and Z .	ell electrons	s only, s	show h	low a comp	ound is formed between (01½ marks
		of non-ellipsis				
(d)	Write the formula	of the W.				(0½ mark
						(0½ mar
•••	(ii) ion formed	by the aton	n of elen	nent, A	.	(01 mg

(ii) a physical change? (01 m. (iii) a chemical change? (0½ m. (b) State what was observed when the mixture is heated. (01½ man (c) Write equation(s) of reaction for the substance(s) where a chemical change to place. (01½ man (d) Give one use of the substance(s) that undergoes a physical change. (0½ man Organic compounds of general formula, C _n H _{2n} can be obtained from alcohols. (a) Name the class of organic compounds with general formula, C _n H _{2n} . (0½ mank (b) Name and write the structural formula of the second member of the class you haven named in (a). (i) Name: (0½ mank	(a)	Whi	ch of these substance(s) undergoes	
(ii) a chemical change? (0½ max) (b) State what was observed when the mixture is heated. (01½ max) (c) Write equation(s) of reaction for the substance(s) where a chemical change to place. 10.	Manganese (IV) oxide is an oxidising agent that can react with hydro	chloric acid.
	(a) What is an oxidising agent?	(01 mark)
	,	
	(b) State	
	(i) the condition(s) required for the reaction to take place.	
	·	
	(ii) what is observed in the reaction apparatus.	(01 mark)
	(iii) one of the precautions taken in this reaction and give answer.	a reason for your (0½ mark)
((c) Write equation of the reaction that takes place.	(01½ marks)

SECTION B (30 MARKS)

Attempt any two questions from this section.

Write the answers to these questions on the answer sheets/booklets provided.

11.	The reaction between	Sulphuric	acid	and	Carbon	leads	to	the	formation	of	Carbon
	dioxide and gas, Q .	-									- 1112011

- (a) (i) Name gas, Q. (0½ mark)
 - (ii) State the condition(s) for the reaction. (01 mark)
 (iii) Write equation of the reaction that takes place. (01½ marks)
- (b) (i) Apart from carbon, name one other non-metal and one metal that can react with Sulphyric acid under similar and discuss to metal that can react
- with Sulphuric acid under similar conditions to produce gas, Q. (01 mark)

 (ii) Write equation of reaction in each case for the non-metal and metal you have named with the acid. (03 marks)
- (c) A compound, Y, can also react with Sulphuric acid to produce gas, Q, in the laboratory.
 - (i) Name compound, Y. (0½ mark)
 - (ii) Describe how a dry sample of gas, Q, can be prepared from Sulphuric acid and compound, Y. (06½ marks)
- (d) State how gas, Q, can be identified in the laboratory. (01 mark)
- 12. A sample of hydrogen chloride gas was produced when 7.45 g of Potassium chloride crystals were reacted with an acid.
 - (a) (i) Name the acid used in this reaction. (0½ mark)
 - (ii) State the condition(s) for the reaction. (01 mark)
 - (iii) Write equation of the reaction that takes place. (01½ marks)
 - (iv) Calculate the volume of hydrogen chloride gas that was produced in this reaction. (02½ marks)
 - (b) Describe how a dry sample of hydrogen chloride gas can be prepared from potassium chloride and the acid you have named in (a) (i). (05½ marks)
 - (c) Chlorine water forms a solution of hydrogen chloride when exposed to sunlight.
 - (i) Name another substance produced in this reaction. (0½ mark)
 - (ii) Write equation of the reaction that takes place. (01½ marks)
 - (d) Explain why an aqueous solution of hydrogen chloride gas liberates carbon dioxide gas from hydrogen carbonates whereas a solution of hydrogen chloride in methylbenzene does not.

 (02½ marks)

13.	Sta	arch and polythene are polymers.	
	(a)	What is a polymer?	•
	(b)		(02 marks)
	(c)	Name the monomer(s) of these two polymers.	(01 mark)
	(d)	Give one other polymer in the category of (i) starch. (ii) polythene.	(01 mark) (0½ mark)
	(e)		(0½ mark)
		 (i) starch can be converted to an alcohol. (ii) polythene can be prepared from an alcohol. (No diagram is required in both cases) 	(03½ marks) (04½ marks)
	(f)	The monomer(s) of polythene can react with bromine water.	
		(i) State what is observed.(ii) Write equation of the reaction that takes place.	(01 mark) (01 mark)
14.	Exp	plain the following observations, illustrating your answer(s) with equessary.	
	(a)	When Silver nitrate crystals were heated strongly in a dry test tube, fumes were produced that were able to relight a glowing splint. A left as the residue.	reddish brown grey solid was (03½ marks)
	(b)	When electrolysis of a concentrated solution of sodium chloride soluting carbon electrodes, a solution that turned litmus solution to blat the end.	ution was done
	(c)	When dissolved in water, ammonium chloride exists as shown is below:	in the equation
		$NH_4Cl(s) + H_2O(l)$ \longrightarrow $NH_4OH(aq) + HCl(aq)$	
		The solution of ammonium chloride turns litmus paper to Red and with solid sodium carbonate with effervescence taking place.	d readily reacts (03½ marks)
	(d)	Sodium hydroxide pellets turn to a liquid when left in open air or for a few hours. However, after some days a white solid is forme glass.	n a watch glass d on the watch (04 marks)
, ,			END
